„ IV. Marriages, births, and deaths by counties	8
„ V. Births and deaths for principal towns	10
„ VI. Deaths for Dublin and Cork	11
„ VII. Notifications of infectious diseases	12

NOTE—The figures in this report are provisional. The number of births and deaths is exclusive of the number of late registrations i.e. births and deaths registered on the authority of the Registrar General. Deaths have been assigned so far as possible to the area of residence, and those of non-residents have been excluded.

MARCH QUARTER, 1950.

MARRIAGES.

The marriages registered during the quarter numbered 3,457, equivalent to an annual rate of 4.6 per 1,000 of the estimated population; this rate is 0.5 below that for the corresponding quarter of 1949.

Of the total marriages, 3,289 (or 4.7 per 1,000 of the estimated number of Catholics in the population) were celebrated in accordance with the rites and ceremonies of the Catholic Church. The remainder (168) is equivalent to 3.4 per 1,000 of the population other than Catholic.

BIRTHS.

The number of births registered during the quarter amounted to 15,931, of which 8,269 were those of males and 7,662 those of females.

The number represents a rate of 21.2 per 1,000 of the estimated population, which is 0.7 below that for the first quarter of 1949.

The total includes 388 illegitimate births, equivalent to 2.4 per cent of the total births recorded.

DEATHS.

The number of deaths registered during the quarter was 11,218; of this number 5,880 were those of males and 5,338 those of females.

The equivalent annual rate was 15.0 per 1,000 of the estimated population, being 0.7 above the rate for the first quarter of the preceding year.

Tuberculosis.—Deaths from this disease numbered 709, including 578 from pulmonary tuberculosis and 131 from other forms of tuberculosis. The figures for the first quarter of 1949 were 784, 631 and 153 respectively. The rate for all forms of this disease for the first quarter of 1950 was 0.9 per 1,000, that for pulmonary tuberculosis being 0.8 and all other forms 0.1, the corresponding rates for the first quarter of the preceding year being 1.0, 0.8 and 0.2.

Other Infective Diseases.—The deaths classified under this heading include 4 from typhoid fever (including one from paratyphoid), 2 from scarlet fever, 3 from diphtheria, 16 from whooping cough, 9 from acute poliomyelitis, one from acute infectious encephalitis, and 9 from measles. Comparative figures for these diseases so far as possible, are given in Table II.

Influenza.—The number of deaths from influenza was 111, which is 23 more than that for the first quarter of 1950.

Malignant Neoplasms.—Deaths under this heading numbered 972, being equivalent to a rate of 1.3 per 1,000 of the population: in the corresponding quarter of 1949 the number was 1,038 and the rate 1.4.

Puerperal Causes. Deaths from these causes were represented by a rate of 1.2 per 1,000 births registered, as compared with 1.5 for the first quarter of last year.

Infant Mortality.—The rate (deaths of infants under one year of age per 1,000 births registered) was 59, compared with a rate of 55 for the March quarter of 1949.

Population.—It is estimated that at the middle of the year 1950 the population was 3,000,000 (1,517,000 males and 1,483,000 females). This estimate, based on the population according to the Census of Population, 1946, the number of births and deaths registered, and the passenger movement (including emigration and immigration), is provisional.

TABLE III.—DEATH RATES from all causes and from some of the principal causes per 1,000 of the population, the mortality per 1,000 births represented by deaths of infants and particulars of the deaths from puerperal causes during the March Quarter, 1950.

* The rates for Ireland and the City of Dublin are calculated on the estimated population at the middle of 1950 and those for the other areas on the population according to the Census of Population, 1946.

† The rates for the county boroughs of Dublin, Cork, Limerick and Waterford are calculated on the number of urban births for each of these areas given in Table V., and those for the counties of Dublin, Cork, Limerick and Waterford on the number of births registered therein plus an estimate of births for these counties occurring in institutions in the respective county boroughs.

(††) Excluding the six north-eastern counties.

Table VII.—Summary of Cases of Infectious Diseases notified to the Department of Health during the March Quarter, 1950.

This Summary has been prepared from the Department's Weekly Returns, but adjustments have been made in respect of any corrections of these returns received after their issue.

The letters in the last column denote the following diseases : A. Acute Anterior Poliomyelitis. B. Cerebro-spinal Fever. C. Encephalitis Lethargica. D. Diarrhoea and Enteritis. E. Paratyphoid A. F. Paratyphoid B. G. Trachoma. H. Erysipelas. J. Ophthalmia Neonatorum. K. Pemphigus Neonatorum. L. Undulant Fever. M. Continued Fever. N. Dysentery (Bacillary). O. Dysentery (Amoebic). P. Malaria. Q. Membranous Croup. U. Scabies. V. Infective Hepatitis. W. Streptococcal Sore Throat. X. Tinea Capitis. Y. Rubella. Z. Chicken Pox. Z (1). Infective Mononucleosis. Z (2). Salmonella Infection. Z (3). Weil's Disease.

	„ IV. Marriages, births, and deaths by counties	24
	„ V. Births and deaths for principal towns	26
	„ VI. Deaths for Dublin and Cork	27
	„ VII. Notifications of infectious diseases	28

NOTE—The figures in this report are provisional. The number of births and deaths is exclusive of the number of late registrations i.e. births and deaths registered on the authority of the Registrar General. Deaths have been assigned so far as possible to the area of residence, and those of non-residents have been excluded.

JUNE QUARTER, 1950.

MARRIAGES.

The number of marriages returned during the quarter was 3,757, equivalent to an annual rate of 5.0 per 1,000 of the estimated population; this rate is 0.2 above that for the corresponding quarter of 1949.

Of the total marriages, 3,503 (or 4.9 per 1,000 of the estimated number of Catholics in the population) were celebrated in accordance with the rites and ceremonies of the Catholic Church. The remainder (254) is equivalent to 5.9 per 1,000 of the population other than Catholic.

BIRTHS.

The number of births registered during the quarter amounted to 16,936, of which 8,778 were those of males and 8,158 those of females.

The number represents a rate of 22.5 per 1,000 of the estimated population, which is 0.3 above that for the second quarter of 1949.

The total includes 432 illegitimate births, equivalent to 2.6 per cent of the total births recorded.

DEATHS.

The number of deaths registered during the quarter was 9,724; of this number 5,120 were those of males and 4,604 those of females.

The equivalent annual rate was 12.9 per 1,000 of the estimated population, being 0.4 below the rate for the second quarter of the preceding year.

Tuberculosis.—Deaths from this disease numbered 648, including 501 from pulmonary tuberculosis and 147 from other forms of tuberculosis. The figures for the second quarter of 1949 were 749, 597 and 152 respectively. The rate for all forms of this disease for the second quarter of 1950 was 0.9 per 1,000, that for pulmonary tuberculosis being 0.7 and all other forms 0.2, the corresponding rates for the first quarter of the preceding year being 1.0, 0.8 and 0.2.

Other Infective Diseases.—The deaths classified under this heading include one from paratyphoid fever, 2 from scarlet fever, 16 from whooping cough, 3 from acute poliomyelitis, one from acute infectious encephalitis, and 9 from measles. Comparative figures for these diseases so far as possible, are given in Table II.

Influenza.—The number of deaths from influenza was 130, which is 14 more than that for the second quarter of 1949.

Malignant Neoplasms.—Deaths under this heading numbered 927, being equivalent to a rate of 1.2 per 1,000 of the population: in the corresponding quarter of 1949 the number was 933 and the rate 1.2.

Puerperal Causes. Deaths from these causes were represented by a rate of 1.1 per 1,000 births registered, as compared with 1.6 for the first quarter of last year.

Infant Mortality.—The rate (deaths of infants under one year of age per 1,000 births registered) was 44, compared with a rate of 50 for the June quarter of 1949.

Population.—It is estimated that at the 30th June, 1950, the population was 3,006,000 (1,520,000 males and 1,486,000 females). This estimate, based on the population according to the Census of Population, 1946, the number of births and deaths registered, and the passenger movement (including emigration and immigration), is provisional.

Table II.—DEATHS registered from some of the PRINCIPAL CAUSES during each of the years 1945 to 1950 by quarterly periods with the rates represented thereby.

YEAR AND QUARTER	DEATHS FROM												DEATH RATE

* The rates for Ireland and the City of Dublin are calculated on the estimated population at the middle of 1950 and those for the other areas on the population according to the Census of Population, 1946.

† The rates for the county boroughs of Dublin, Cork, Limerick and Waterford are calculated on the number of urban births for each of these areas given in Table V., and those for the counties of Dublin, Cork, Limerick and Waterford on the number of births registered therein plus an estimate of births for these counties occurring in institutions in the respective county boroughs.

(††) Excluding the six north-eastern counties.

Table IV.—MARRIAGES, BIRTHS and DEATHS Registered by Provinces and Counties, with the Deaths from some of the principal causes, during the June Quarter, 1950.

PROVINCES AND COUNTIES	Area in Statute Acres	Popula- tion according to the Census of Popula- tion, 1946	Marri- ages	Births*	Deaths	DEATHS

„ V. Births and deaths for principal towns	42
„ VI. Deaths for Dublin and Cork	43
„ VII. Notifications of infectious diseases	44

NOTE—The figures in this report are provisional. The number of births and deaths is exclusive of the number of late registrations i.e. births and deaths registered on the authority of the Registrar General. Deaths have been assigned so far as possible to the area of residence, and those of non-residents have been excluded.

SEPTEMBER QUARTER, 1950.

MARRIAGES.

The number of marriages returned during the quarter was 5,600, equivalent to an annual rate of 7.5 per 1,000 of the estimated population; this rate is 0.4 above that for the corresponding quarter of 1949.

Of the total marriages, 5,293 (or 7.5 per 1,000 of the estimated number of Catholics in the population) were celebrated in accordance with the rites and ceremonies of the Catholic Church. The remainder (307) is equivalent to 7.2 per 1,000 of the population other than Catholic.

BIRTHS.

The number of births registered during the quarter amounted to 15,907, of which 8,183 were those of males and 7,724 those of females.

The number represents a rate of 21.3 per 1,000 of the estimated population, which is 0.8 below that for the third quarter of 1949.

The total includes 417 illegitimate births, equivalent to 2.6 per cent of the total births recorded.

DEATHS.

The number of deaths registered during the quarter was 7,721; of this number 4,145 were those of males and 3,576 those of females.

The equivalent annual rate was 10.3 per 1,000 of the estimated population, being 0.5 below the rate for the third quarter of the preceding year.

Tuberculosis.—Deaths from this disease numbered 505, including 381 from pulmonary tuberculosis and 124 from other forms of tuberculosis. The figures for the third quarter of 1949 were 602, 463 and 139 respectively. The rate for all forms of this disease for the third quarter of 1950 was 0.7 per 1,000, that for pulmonary tuberculosis being 0.5 and all other forms 0.2. The corresponding rates for the third quarter of the preceding year were 0.8, 0.6 and 0.2.

Other Infective Diseases.—The deaths classified under this heading include 2 from typhoid fever, 17 from whooping cough, 5 from acute poliomyelitis, one from acute infectious encephalitis, and 3 from measles. Comparative figures for these diseases, so far as possible, are given in Table II.

Influenza.—The number of deaths from influenza was 30, which is 14 more than that for the third quarter of 1949.

Malignant Neoplasms.—Deaths under this heading numbered 982, being equivalent to a rate of 1.3 per 1,000 of the population: in the corresponding quarter of 1949 the number was 996 and the rate 1.3.

Puerperal Causes. Deaths from these causes were represented by a rate of 1.1 per 1,000 births registered, as compared with 1.8 for the third quarter of last year.

Infant Mortality.—The rate (deaths of infants under one year of age per 1,000 births registered) was 37, compared with a rate of 44 for the September quarter of 1949.

Population.—It is estimated that at the 30th September, 1950, the population was 2,992,000 (1,513,000 males and 1,479,000 females). This estimate, based on the population according to the Census of Population, 1946, the number of births and deaths registered, and the passenger movement (including emigration and immigration), is provisional.

TABLE III.—DEATH RATES from all causes and from some of the principal causes per 1,000 of the population, the mortality per 1,000 births represented by deaths of infants and particulars of the deaths from puerperal causes during the September Quarter, 1950.

* The rates for Ireland and the City of Dublin are calculated on the estimated population at the 30th September, 1950 and those for the other areas on the population according to the Census of Population, 1946.

† The rates for the county boroughs of Dublin, Cork, Limerick and Waterford are calculated on the number of urban births for each of these areas given in Table V., and those for the counties of Dublin, Cork, Limerick and Waterford on the number of births registered therein plus an estimate of births for these counties occurring in institutions in the respective county boroughs.

(††) Exclusive of the Six Counties.

Table IV.—MARRIAGES, BIRTHS and DEATHS Registered by Provinces and Counties, with the Deaths from some of the principal causes, during the September Quarter, 1950.

„ 4.	Deaths for Dublin and Cork	72
„ 5.	Notifications of infectious diseases	73

NOTE—The figures in this report are provisional. The number of births and deaths is exclusive of the number of late registrations i.e. births and deaths registered on the authority of the Registrar General. Deaths have been assigned so far as possible to the area of residence, and those of non-residents have been excluded.

DECEMBER QUARTER, 1950.

MARRIAGES.

The number of marriages returned during the quarter was 3,359, equivalent to an annual rate of 4.5 per 1,000 of the estimated population; this rate is 0.3 below that for the corresponding quarter of 1949.

Of the total marriages, 3,201 (or 4.5 per 1,000 of the estimated number of Catholics in the population) were celebrated in accordance with the rites and ceremonies of the Catholic Church. The remainder (158) is equivalent to 3.7 per 1,000 of the population other than Catholic.

BIRTHS.

The number of births registered during the quarter amounted to 14,489, of which 7,520 were those of males and 6,969 those of females.

The number represents a rate of 19.3 per 1,000 of the estimated population, which is 0.1 below that for the fourth quarter of 1949.

The total includes 320 illegitimate births, equivalent to 2.2 per cent of the total births recorded.

DEATHS.

The number of deaths registered during the quarter was 9,172, of this number 4,927 were those of males and 4,245 those of females.

The equivalent annual rate was 12.2 per 1,000 of the estimated population, being 0.1 above the rate for the fourth quarter of the preceding year.

Tuberculosis.—Deaths from this disease numbered 491, including 400 from tuberculosis of the respiratory system and 91 from other forms of tuberculosis. The figures for the fourth quarter of 1949 were 516, 420 and 96 respectively. The rate for all forms of this disease for the fourth quarter of 1950 was 0.6 per 1,000 of the estimated population, that for tuberculosis of the respiratory system being 0.5 and all other forms 0.1. The corresponding rates for the fourth quarter of the preceding year were 0.7 0.6 and 0.1.

Other Infective Diseases.—The deaths classified under this heading include 3 from typhoid fever, 2 from scarlet fever, 2 from diphtheria, 11 from whooping cough, 6 from acute poliomyelitis, and 10 from measles. Comparative figures for these diseases, so far as possible, are given in Table II.

Malignant Neoplasms.—Deaths under this heading numbered 1022, being equivalent to a rate of 1.4 per 1,000 of the estimated population: in the corresponding quarter of 1949 the number was 956 and the rate 1.3.

Influenza.—The number of deaths from influenza was 36, which is 8 less than that for the fourth quarter of 1949.

Puerperal Causes. Deaths from these causes were represented by a rate of 0.9 per 1,000 births registered, as compared with 1.8 for the fourth quarter of last year.

Infant Mortality.—The rate (deaths of infants under one year of age per 1,000 births registered) was 41, compared with a rate of 58 for the December quarter of 1949.

Population.—It is estimated that at the 1st July, 1950, the population was 3,006,000 (1,520,000 males and 1,486,000 females). This estimate, based on the population according to the Census of Population, 1946, the number of births and deaths registered, and the passenger movement (including emigration and immigration), is provisional.

Table I.—MARRIAGES, BIRTHS and DEATHS registered in the years 1945 to 1950, by Quarters.

* The rates for Ireland and the City of Dublin are calculated on the estimated population at the 1st July, 1950, and those for the other areas on the population according to the Census of population according to the Census of Population, 1946.

† The rates for the county boroughs of Dublin, Cork, Limerick and Waterford are calculated on the number of urban births for each of these areas given in Table V, and those for the counties of Dublin, Cork, Limerick and Waterford on the number of births registered therein plus an estimate of births for these counties occurring in institutions in the respective county boroughs.

(††) Exclusive of the Six Counties.

Table IV.—MARRIAGES, BIRTHS and DEATHS Registered by Provinces and Counties, with the Deaths from some of the principal causes, during the December Quarter, 1950.

Marriages, Births, Deaths, December Quarter, 1950.

TOTAL 14 TOWNS</

(a) According to the Census of 1946. The populations for the City of Dublin and the Borough of Dun Laoghaire are estimated to the 1st July, 1950.
(b) The number of births in this Table is partially corrected according to the residence of the mother. The number of births in Table IV is the total registered in the respective areas.

Table VI—Deaths registered for the City of Dublin and County Borough of Cork by Registrars' Districts, during the December Quarter, 1950

Yearly Summary
1950

YEAR 1950.**MARRIAGES.**

The number of marriages returned during the year was 16,173, equivalent to an annual rate of 5.4 per 1,000 of the estimated population; this rate is the same as that for the year 1949.

Of the total marriages, 15,286 (or 5.4 per 1,000 of the estimated number of Catholics in the population) were celebrated in accordance with the rites and ceremonies of the Catholic Church. The remainder (887) is equivalent to 5.2 per 1,000 of the population other than Catholic.

BIRTHS.

The number of births registered during the year amounted to 63,263, of which 32,750 were those of males and 30,513 those of females.

This number represents a rate of 21.0 per 1,000 of the estimated population, being 0.4 below the rate for the year 1949.

The total includes 1,557 illegitimate births equivalent to 2.5 per cent. of the total births recorded.

DEATHS.

The number of deaths registered during the year was 37,835; of this number 20,072 were of males, and 17,763 of females.

The equivalent annual rate was 12.6 per 1,000 of the estimated population, being 0.1 below the rate for the preceding year.

Tuberculosis.—Deaths from this disease numbered 2,353, including 1860 from tuberculosis of the respiratory system and 493 from other forms of tuberculosis. The figures for the year 1949, were 2,651, 2,111 and 540 respectively. The rate for all forms of this disease for 1950 was 0.8 per 1,000 of the estimated population, that for tuberculosis of the respiratory system being 0.6 and all other forms 0.2. The corresponding rates for the preceding year were 0.9, 0.7 and 0.2.

Other Infective Diseases.—The deaths classified under this heading include 9 from typhoid fever, 6 from scarlet fever, 5 from diphtheria, 60 from whooping cough, 23 from acute poliomyelitis, 3 from acute infectious encephalitis and 31 from measles.

The deaths from diarrhoea and enteritis (under 2 years of age) numbered 256, including 41 for the City of Dublin.

Malignant Neoplasms.—Deaths under this heading numbered 3,903, being equivalent to a rate of 1.3 per 1,000 of the estimated population; in the year 1949 the number was 3,923, and the rate also 1.3.

Influenza.—The number of deaths from influenza was 307, which is 43 more than that for the year 1949.

Puerperal Causes.—Deaths from these causes are represented by a rate of 1.1 per 1,000 births registered, as compared with 1.6 for 1949.

Infant Mortality.—The rate (deaths of infants under one year of age per 1,000 births registered) was 45, compared with a rate of 51 for the year 1949. The rate for the year 1950 is the lowest ever recorded.

Table 1.—MARRIAGES, BIRTHS and DEATHS Registered by Provinces and Counties, with Deaths from some of the Principal Causes during the year 1950.

* The rates for Ireland and the City of Dublin are calculated on the estimated population at the 1st July, 1950 and those for the other areas on the population according to the Census of Population, 1946.

† The rates for the county boroughs of Dublin, Cork, Limerick and Waterford are calculated on the number of urban births for each of these areas given in Table V., and those for the counties of Dublin, Cork, Limerick and Waterford on the number of births registered therein plus an estimate of births for these counties occurring in institutions in the respective county boroughs.

(††) Exclusive of the Six Counties.

(a) According to the Census of 1946. The population for the City of Dublin and the Borough of Dun Laoghaire are estimated to the 1st July, 1950.

(b) The number of births in this Table is partially corrected according to the residence of the mother. The number of births in Table IV is the total registered in the respective areas.

Table 5. — Summary of Cases of Infectious Diseases notified to the Department of Health during the year 1950.

This Summary has been prepared from the Department's Weekly Returns but adjustments have been made in respect of any corrections of these returns received after their issue.

The letters in the last column denote the following diseases :—A. Acute Anterior Poliomyelitis. B. Cerebro-spinal Fever. C. Encephalitis Lethargica. D. Diarrhoea and Enteritis. E. Paratyphoid A. F. Paratyphoid B. G. Trachoma. H. Erysipelas. J. Ophthalmia Neonatorum. K. Pemphigus Neonatorum. L. Undulant Fever. M. Continued Fever. N. Dysentery (Bacillary). O. Dysentery (Amoebic). P. Malaria. Q. Membranous Group. R. Puerperal Pyrexia. S. Influenzal pneumonia. T. Puerperal Sepsis. U. Scabies. V. Infective Hepatitis. W. Streptococcal Sore Throat. X. Tinea Capitis. Y. Rubella. Z(2). Salmonella Infection. Z(3). Weil's Disease.
